CRSP US 1925 STOCK & INDEXES: SAS, ASCII & R FILES

Flat File Table Layouts

Five sets of flat files are built from the CRSP Stock and Index databases. A number of our subscribers have long requested alternate formats of our databases in order to automate or streamline their processes and easily ingest CRSP data into them. These flat files are intended for these purposes.

- SIZ – 1925 US Stock and Indexes
- SAZ – 1925 US Stock
- SXZ – 1962 US Stock and Indexes
- S6Z – 1962 US Stock
- SFZ - 1925 US Indexes

Overview

Comparisons between the legacy CRSPAccess Stock and Index databases and the CRSP flat files will reveal differences, outlined here:

Derived Data

The flat files provide all of the underlying data that can be used to generate derived data items, but do not include the derived items themselves. Examples of derived data that TSQuery and ts_print can generate that are not found in the flat files include excess and cumulative returns, last non-missing, recent, previous period versions of time series data items.

Double Precision

CRSPAccess stored most items, including commonly used Price (PRC), Ask or High Price (ASKHI), and Bid or Low Price (BIDLO), as 4-byte floating point numbers. The SAS and `R` formats default to storing those items as 8-byte (double precision) floating point numbers. For the majority of historical values, this does not result in any difference. However, the conversion to SAS's double precision, makes more apparent a known issue of phantom precision related to decimal pricing. For example, IBM's price on 11/27/2015 of \$138.46 will, if displayed with five decimal places, show \$138.46001. For the post-2000 period, the flat files "round" these values by converting to a seven significant digits (the limit of a 4-byte floating point number) in scientific notation (e.g. 1.384600E+02) version of the number and storing it in a 8-byte floating point number. For the ASCII flat files, these are then output with 14 significant digits (the limit of the a 8-byte floating point number) in scientific notation (e.g. 1.3846000000000E+02).

CRSP is re-engineering our back office to correct any remaining phantom precision and increase the real precision throughout the Stock and Indexes flat files in the coming year.

CRSP Total Market

The investable CRSP Total Market Index is included in the index files associated with the stock and index database. Daily price-only and total returns, levels, and counts are included.

Volumes differences

The introduction of double precision allows for the monthly volumes to be stored in same unit (1 share) as daily volumes rather than as a unit of 100 shares. Monthly volumes in the flat files are now stored as one hundred times the value in legacy CRSPAccess. The change also allowed for four missing daily volumes for Citigroup in 2009 and 2010 to be replaced with actual values that were in excess of two billion, and for those monthly volumes to be recalculated.

KYPERMNO	CALDT	NEW VOL	MCALDT	NEW MVOL
70519	08/05/2009	2,674,463,281	08/31/2009	22,798,732,177
70519	12/17/2009	3,772,638,437	12/31/2009	15,021,795,593
70519	12/18/2009	2,813,697,156		
70519	12/07/2010	3,267,829,406	08/31/2009	13,427,190,606

Missing Values

In CRSPAccess, missing values were indicated by the use of defined non-null values (e.g -99 for returns and 0 for prices). In the flat files, missing values are now represented by null values.

In the SAS files, CRSP uses the default SAS missing value, displayed as a "." In the coming year, CRSP will be further examining all missing value conventions.

Each data item in each table is associated with a Data Category. The Data Category identifies the type of item and the associated formats for use with SAS, ASCII, R, and SQL.

Missing values are displayed as follows:

- ASCII missing values, regardless of type, is an empty string
- SAS missing values are an empty string for character fields and SAS missing (displayed as a.) for numeric fields
- R missing values are an empty string for character fields, and 'R' missing (displayed as N/A) for float, int, date and datetime.

Stock Data File Layouts

Note: Sort column references items in each table that, combined in the prescribed order, will identify unique records. These fields are usually a combination of one key and one date field, but sometimes includes other fields.
